1. Development Board Introduction

1.1. Development Board Overview

ESP32-P4-MINI development board is a multimedia development board based on WT0132P4-A1 core board designed by Wireless-tag Technology Co., Limited.The WT0132P4-A1 core board based on Espressif ESP32-P4 series chip, featuring a dual-core 360 MHz RISC-V processor and 32 MB PSRAM.Additionally, the ESP32-P4 supports various peripherals such as USB 2.0, MIPI-CSI and MIPI-DSI, making it ideal for cost-effective, low-power multimedia product development.

1.2. Development Board Pictures

Figure 1: ESP32-P4-MINI Development Board (front)

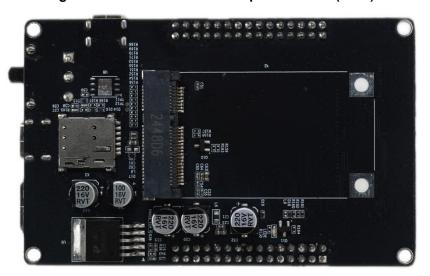

Figure 2: ESP32-P4-MINI Development Board (back)

2. Getting Started

This section provides a brief introduction to ESP32-P4-MINI development board, instructions on how to do the initial hardware setup and how to flash firmware onto it.

2.1. Component Introduction

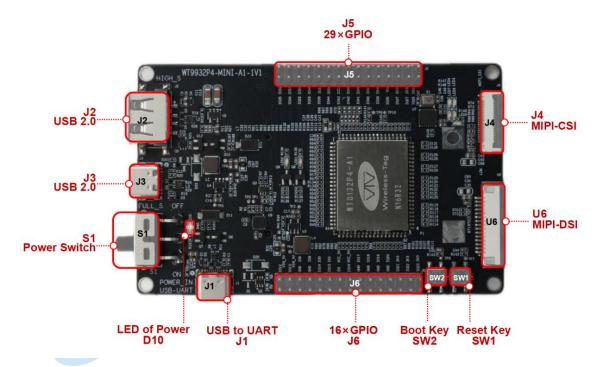

Figure 3: ESP32-P4-MINI Development Board Component Description (front)

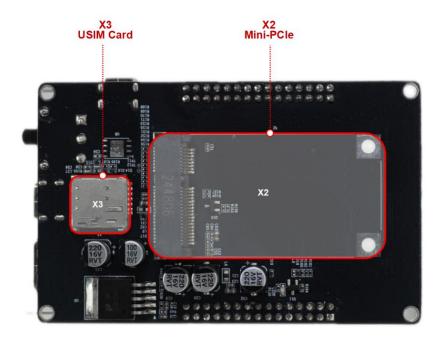

Figure 4: ESP32-P4-MINI Development Board Component Description (back)

The key components of the board are described in a clockwise direction.

Key Component	Description
ıe	Some of the available pins on the core board have been
J5	routed to J5.For more details,see Header Block.
MIPI-CSI	MIPI CSI FPC connector is used for connecting external
MIPI-CSI	camera module to enable image transmission.
MIPI-DSI	MIPI DSI FPC connector is used for connecting displays.
Reset Key	Resets the board.
	The boot mode control button.Press the Reset Key while
Poot Koy	holding down the Boot Key to reset WT0132P4-A1 and
Boot Key	enter firmware download mode.Firmware can then be
	downloaded to SPI flash via the USB-to-UART Port.
J6	Some of the available pins on the core board have been
36	routed to J6.For more details,see Header Block.
	This port can be used to power the board,flash firmware to
USB to UART	the chip,and communicate with the WT0132P4-A1 via the
	USB-to-UART Bridge Chip.
LED of Power	Lights up when the development board is connected to the
LLD 011 0WC1	power supply through any of the power supply connectors.
	Power On/Off Switch.Toggling toward the ON sign powers
Power Switch	the board on (5 V),toggling away from the ON sign powers
	the board off.
	The USB 2.0 Type-C Port connected to the USB 2.0 OTG
	Full-Speed interface of the ESP32-P4 chip on the
USB 2.0	WT0132P4-A1 core board.When communicating with
000 2.0	other devices via this port, ESP32-P4 acts as a USB
	device connecting to a USB host,which can also be used
	as the power supply interface of the development board.

	The USB 2.0 Type-C Port connected to the USB 2.0 OTG
	High-Speed interface of the ESP32-P4 chip on the
USB 2.0	WT0132P4-A1 core board.When communicating with
	other devices via this port,ESP32-P4 acts as a USB host
	and supply power to the other devices.
USIM Card	USIM card slot for inserting a USIM card to realize the
USIM Card	communication function based on the mobile
USIM Card	communication function based on the mobile communication network.
USIM Card	
	communication network.
USIM Card Mini-PCle	communication network. Mini-PCle interface, connected to the UART and USB

2.2. Preliminary

- ESP32-P4-MINI
- USB-C cables
- Computer running Windows, Linux, or macOS
- LCD (Optional)
- Camera (Optional)
- CAT.1 Module and USIM card (Optional)

2.3. Hardware Setup

Connect the ESP32-P4-MINI to your computer using a USB cable. The board can be powered through any of the USB Type-C ports. The USB-to-UART Port is recommended for flashing firmware and debugging.

2.4. Software Setup

To set up your development environment and flash an application example onto your board, please follow the instructions in ESP-IDF Get Started. Or go to Wireless-Tag GitHub Examples, development board application examples have been stored, download compile and burn the application to the

development board to start development.

3. Hardware Reference

3.1. Block Diagram

The block diagram below shows the components of ESP32-P4-MINI and their interconnections.

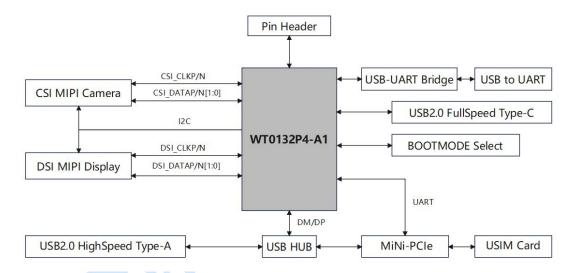

Figure 3: ESP32-P4-MINI Block Diagram

3.2. Header Block

The tables below provide the Name and Function of the pin header(J5).

J6), The pin header names are shown in Development Board Pictures.

No. Name Function

Table 1: Detailed Functional Description of J5 Pin Header

Function

No.	Name	Function		
1	IO33	GPIO33, I3CMST_SDA, GPSPI SPI2 WP,		
I	1033	EMAC PHY TXEN,DBG_PSRAM_DQ5		
2	IO26	GPIO26, USB1P1_N1		
3	0 1000	1022	3 1032	GPIO32, I3CMST_SCL, GPSPI SPI2 HOLD,
3	1032	EMAC RMII CLK, DBG_PSRAM_DQ4		
4	1027	GPIO27, USB1P1_P1		
5	F 1025	GPIO35, GPSPI SPI2 IO5, EMAC PHY TXD1,		
5	IO35	DBG_PSRAM_DQ7		

6	1037	GPIO37, UART0_TXD, GPSPI SPI2 IO7
		Power out
7	VO4	Output voltage range 0.5~2.7V or 3.3V, maximum output
		current 0.2A)
8	1038	GPIO38, UART0_RXD, GPSPI SPI2 DQS
9	IO48	GPIO48, SD1_CDATA7_PAD, GMAC_PHY_RXER_PAD
10	1039	GPIO39, SD1_CDATA0_PAD, REF_50M_CLK_PAD
11	1047	GPIO47, SD1_CDATA6_PAD, GMAC_PHY_RXD1_PAD
12	IO40	GPIO40, SD1_CDATA1_PAD, GMAC_PHY_TXEN_PAD
13	IO46	GPIO46, SD1_CDATA5_PAD, GMAC_PHY_RXD0_PAD
14	IO41	GPIO41, SD1_CDATA2_PAD, GMAC_PHY_TXD0_PAD
15	1045	GPIO45, SD1_CDATA4_PAD, GMAC_PHY_RXDV_PAD
16	1042	GPIO42, SD1_CDATA3_PAD, GMAC_PHY_TXD1_PAD
